## **A** RECIPROCATING SAW **Metabo**

The 18V MultiVolt one-handed compact reciprocating saw provides up to eight hours of runtime on one battery charge. The saw can accept reciprocating saw blades as expected, as well as T-shank jigsaw blades for detailed work, such as cutting arches in plywood or cutting a 1.5 inch hole in a cavity between studs. Its center-balanced design makes one-handed use easier with less fatigue.

## **B** MOBILE HANDWASHING STATION **Sloan Valve Co.**

The stations are equipped with hands-free, sensor-operated technology for indoor and outdoor applications. Each station features a sink, foam soap dispenser, touchless towel dispenser, 16-gallon greywater tank, and either a hot water heater or two 5-gallon water jug holders. The stations are available as self-contained water or water line-connected. They can be used near entrances or exits, food courts, cafeterias, concourses, concessions, escalators and hallways.

## **C** BOILER **Weil-McLain**

The Stainless Vertical Firetube (SVF) boiler portfolio has expanded to include four larger Btu sizes — 1,500, 2,000, 2,500 and 3,000 MBH. The boilers feature 96.8 percent thermal efficiency. The line features a stainless steel, vertical fire tube and shell heat exchanger for corrosion resistance, user-friendly controls to make installation and operation easier, and a long-term corrosion resistance solution in the form of a serviceable and replaceable condensate tray.

## **D** CENTRIFUGAL PUMPS **Bell & Gossett**

Series e-82 twin vertical in-line pumps offer about 40 percent space savings for parallel pumping installations in commercial HVAC and plumbing applications. The pump features stainless impellers to improve sustainable hydraulic performance, resist chemicals and reduce corrosion. The pump's built-in mechanical seal chamber and a flexible stainless steel braided hose ensures seal cooling and lubrication.

## **E** COMPACT LOADER **Bobcat Co.**

M3 Series compact loaders include four skid-steer and compact track loaders. The vehicles feature a turbo-charged diesel engine, a new fuel system, simplified configurations and fewer ancillary options combined with modern decal styling. The models have a lift path of truck bed height or higher. The loaders' interior features an adjustable suspension seat and large entry to accommodate different-sized operators.

## **F** LOCKS **ASSA ABLOY**

The Corbin Russwin CLX3300 series and SARGENT 10X line of bored locks offer vandalism resistance. They can maintain egress while withstanding more than 3,100 inch-pound locked lever torque, and they can prevent entry against 1,600 pounds of offset lever pull. The lock chassis design supports all cylinder formats, from fixed to interchangeable core.
